

Anise-scented Goldenrod

Solidago odoro

Growing Information

- Sunlight: Full sun, partial shade
- Soils: Well-drained sandy soils
- Bloom Time: Late summer - August, September, yellow flowers
- Size: 2-3ft in height

Drought tolerant. Fragrant leaves have the scent of licorice. High ecological value and handsome appearance, it makes a valuable addition to wildflower gardens, meadows, and naturalistic borders.

Garden Companions

Grass-leaved Goldenrod (*Euthamia graminifolia*); Showy Goldenrod (*Solidago speciosa*); Old Field Goldenrod (*Solidago nemoralis*)

Nature Benefits

- Provides important nectar and pollen for native bees.
- Attracts birds, ladybugs, lacewings and other beneficial insects.

Native Habitat

Occurs naturally in fields and meadows.
