

Blue-stemmed Goldenrod

Solidago caesia

Growing Information

- Sunlight: Partial shade, full shade
- Soils: Moist, well-drained soils; tolerant of poor, dry soils
- Bloom Time: Late summer - August, September, yellow flowers
- Size: 2-3ft in height

Drought tolerant, once established. A well-behaved goldenrod, displays bold arching wands of golden clusters in late summer, contrasted by blue-green stems. Adds life to a dry shady spot. Best used at the woodland's edge or in a shaded butterfly or wild garden.

Garden Companions

Scarlet Bee Balm (*Monarda didyma*), Green & Gold (*Chrysogonum virginianum*), Purple Coneflower (*Echinacea* spp.), Big Bluestem grass (*Andropogon gerardii*), Blue Wood Aster (*Aster cordifolius*)

Nature Benefits

- Provides important nectar and pollen for native bees

Native Habitat

Occurs naturally in fields, woodland edge, and roadsides. A true meadow plant.
