

Seaside Goldenrod

Solidago sempervirens

Growing Information

- Sunlight: Sun
- Soils: Sandy, average moisture to dry
- Bloom Time: Yellow flowers in August, September, October
- Size: 2-6ft in height; 2-3ft spread

Perennial with low maintenance is perfect in a pollinator garden and ornamental flower bed. Spreads easily by seeds but does not become invasive. This goldenrod has almost succulent leaves to protect against winds and salt spray. Drought tolerant. Salt spray tolerant. Pinch the growing tips in June for a more compact plant in gardens.

Garden Companions

Switchgrass (*Panicum virgatum*), New England Aster (*Aster novae-angliae*), Brown Eyed Susan (*Rudbeckia triloba*)

Nature Benefits

- Food source for migrating monarch butterflies.
- Attracts songbirds, other butterflies, and small mammals.

Natural Habitat

Occurs on coastal beaches, dunes, and marshes.
