

## Hyssop-leaved Boneset

*Eupatorium hyssopifolium*

### Growing Information

- Sunlight: Sun to Part
- Soils: Wet to dry soil conditions
- Bloom Time: White flowers in August, September
- Size: 2-4ft in height

This meadow plant is a vase shaped perennial. Foliage is narrow and gray green. In late summer plants are covered with dense flat terminal clusters of white florets. The clouds of flowers attract a myriad of pollinators. This species thrives in well drained or dry sites. Good in a grouping or mass planting. Use in a cottage garden, rain garden, perennial border, or xeric-scape design. This is a true Cape Cod native.

### Garden Companions

Black-Eyed Susan (*Rudbeckia hirta*), Purple Coneflower (*Echinacea purpurea*), Little Bluestem (*Schizachyrium scoparium*), Goldenrods (*Solidago spp*), Dense Blazing Star (*Liatris spicata*)

### Nature Benefits

- Unappealing to deer and rabbits.
- A favorite of butterflies, bees, and other pollinators.
- Particularly important to beneficial insects.

### Natural Habitat

Occurs naturally in sandy soils of fields, roadsides, pondshores, and cranberry bog borrow pits.
